

Part 1. Using ipconfig

ipconfig (for Windows) and ifconfig (for Linux/Unix) are among the most useful little utilities in your host, especially for debugging network issues. Here we'll only describe ipconfig, although the Linux/Unix ifconfig is very similar. ipconfig can be used to show your current TCP/IP information, including your address, DNS server addresses, adapter type and so on.

Do the following steps:

- Select Run from the Start Menu of your computer, type cmd and press OK.
- In the command screen window type “**ipconfig /all**” and press enter. The current TCP/IP settings of your network are displayed.

```
C:\Users\YFHD>ipconfig /all

Windows IP 設定

主機名稱 . . . . . : YFHD-Laptop
主要 DNS 尾碼 . . . . . :
節點類型 . . . . . : 混合式
IP 路由啟用 . . . . . : 否
WINS Proxy 啟用 . . . . . : 否

乙太網路卡 Digi Fusion:

連線特定 DNS 尾碼 . . . . . :
描述 . . . . . : Realtek USB GbE Family Controller
實體位址 . . . . . : 00-E0-4C-68-00-D7
DHCP 已啟用 . . . . . : 是
自動設定啟用 . . . . . : 是
連結-本機 IPv6 位址 . . . . . : fe80::f28c:a3b5:9300:cd30%18(偏好選項)
IPv4 位址 . . . . . : 192.168.66.14(偏好選項)
子網路遮罩 . . . . . : 255.255.255.0
租用取得 . . . . . : 2025年12月14日 下午 02:05:53
租用到期 . . . . . : 2025年12月14日 下午 03:05:52
預設閘道 . . . . . : 192.168.66.1
DHCP 伺服器 . . . . . : 192.168.66.1
DHCPv6 IAID . . . . . : 889249868
DHCPv6 用戶端 DUID. . . . . : 00-01-00-01-2F-0D-5A-55-00-E0-4C-68-00-D7
DNS 伺服器 . . . . . : 8.8.8.8
                        1.1.1.1
```

1. What is the host name?	ANS: YFHD-Laptop
2. What is the physical (data-link) address?	ANS: 00-E0-4C-68-00-D7
3. What is the IP address?	ANS: 192.168.66.14
4. What is the IP address of the default gateway?	ANS: 192.168.66.1

8. Examine the DNS response message. How many “answers” are provided?
What do each of these answers contain?

ANS: Only 1 answer provided, it contains the IPv4 address for the ntut.edu.tw
