

A

Dear Sir/Madam,

I am writing to express my interest in a position at TSMC, as advertised on 104.com.tw on 17 February 2025. This looks like a very good fit for my previous engineering experience and I am keen to contribute to your company's continued leadership in advanced chip technology.

I am a dedicated and detail-oriented professional with experience in high-performance environments. My strengths lie in process coordination, data analysis, and problem-solving—skills that align well with the fast-paced and precision-driven culture at TSMC

In my previous roles, I consistently demonstrated a commitment to operational excellence, safety, and continuous improvement. I am passionate about technology and innovation, and I am excited by the opportunity to support TSMC's mission of advancing semiconductor solutions for the global market.

Enclosed, you will find my resume, which provides more details about my experience and the value I can bring to your esteemed company.

I would welcome the opportunity to meet with you to discuss the position with you soon.

Yours sincerely,
John Chen

B

Dear Hiring Manager,

I am writing to apply for a job at TSMC. I heard you are a good company and I want to work there. I have done some work before and I think I can be a good worker. I am also a team player and I like learning new things. I am really interested in chips and computers.

I hope you can give me a chance to prove myself. Please see my resume. Thank you.

Yours sincerely,
John Chen

C

Dear Mr. Huang,

I am writing to express my strong interest in the position of **Process Engineer** at **Taiwan Semiconductor Manufacturing Company (TSMC)**. With a Bachelor's degree in Electrical Engineering and hands-on experience in cleanroom operations and semiconductor testing, I am eager to contribute to TSMC's industry-leading innovation and commitment to excellence.

In my previous internship at a microelectronics lab, I assisted in wafer inspection and statistical analysis of process variation. This experience not only sharpened my technical skills but also taught me the importance of precision, consistency, and teamwork in a high-stakes production environment—values that deeply align with TSMC's global reputation.

What excites me most about TSMC is your pioneering role in advanced process technologies and your investment in sustainability and talent development. I am highly motivated to bring my strong work ethic, problem-solving skills, and passion for semiconductor innovation to your team.

I would appreciate the opportunity to further discuss how I can contribute to your team. Thank you for your time and consideration. I look forward to the possibility of an interview.

Yours sincerely,
John Chen

D

Dear Ms. Huang,

As a recent graduate in Electrical Engineering with over two years of hands-on experience in semiconductor process development and cleanroom lab work, I am excited to apply for the **Process Integration Engineer** position at TSMC. With a strong foundation in device physics, lithography, and yield analysis, I am confident in my ability to contribute meaningfully to your team's innovation and precision.

During my final year at National Taipei University of Technology, I completed a capstone project focused on **optimizing photoresist coating uniformity in 7nm process nodes**, which gave me firsthand experience with defect inspection tools and statistical process control (SPC) techniques. Additionally, I interned at a semiconductor equipment supplier where I collaborated with engineers on **etch rate calibration and process chamber diagnostics**, helping reduce tool downtime by 15%.

I bring both theoretical and practical experience that align closely with TSMC's cutting-edge manufacturing environment. Here are a few highlights of my qualifications that speak directly to the key responsibilities listed in your job post:

- Assisted in the development of a plasma etching recipe that improved selectivity by 18% during a university-industry collaboration project.
- Conducted root-cause failure analysis using SEM and TEM imaging to address pattern collapse during the lithography process.
- Applied DOE (Design of Experiments) and JMP software to model optimal deposition conditions in a thin-film PECVD lab.
- Participated in a yield enhancement team during my internship that identified and eliminated a systematic wafer edge defect using SPC and real-time monitoring.

What distinguishes me is my ability to quickly analyze complex problems and apply both analytical and hands-on skills to support yield improvement and cycle time reduction—objectives that are central to TSMC's leadership in the semiconductor industry.

I would welcome the opportunity to further demonstrate how my skills can support your team. Thank you for considering my application—I look forward to speaking with you soon.

Warm regards,

John Chen
